ASHISH BACHAVALA

Senior Software Engineer

New York, NY | ashish081099@gmail.com | (302) 670-6888 | www.bachavala.com | ashishbachavala | ashish0810

Senior Software Engineer with 5+ years building distributed, revenue-critical systems at Mixpanel, Microsoft, and Amazon. Currently own billing and monetization engineering at Mixpanel, building the pricing, invoicing, and usage-metering systems that turn product usage into revenue, and extending them to AI agents and agentic commerce. Full-stack generalist spanning backend services, data pipelines, deployment infrastructure, and customer-facing product work.

EXPERIENCE

Mixpanel

Senior Software Engineer New York, NY — November 2026 – Present

Software Engineer Remote — January 2025 – October 2026

- Tech lead and company-wide engineering point of contact for billing and monetization; lead a team of 4 engineers, onboard and mentor teammates, and shape the design of projects across engineering that touch the billing system, partnering with finance, product, and account management
- Designed and led Overage Forgiveness end to end, letting customers right-size their plans instead of facing surprise overage bills and converting volatile overages into $500K+ of predictable ARR
- Uncovered invoicing defects that undercharged overages by ~$100K per year and rebuilt invoicing to bill usage accurately every month, recovering that revenue
- Designed and built a real-time usage service that determines whether an account is within quota and gates each request for Mixpanel's upcoming AI agent engine
- Integrated Mixpanel as a provider in Stripe's agentic provisioning ecosystem, enabling AI agents to sign up for, purchase, and provision Mixpanel on a user's behalf
- Shipped self-serve pricing launches that brought enterprise products to free and paid plans with customizable volume across thousands of accounts, coordinating product, finance, and billing teams

Microsoft

Software Engineer Redmond, WA — September 2021 – December 2024

- Built zero-touch, compliance-ready test, build, and release pipelines enabling deployments to federal air-gapped clouds; adopted by all 4 of the team's services and 5+ services on other teams
- Developed big data pipelines that calculate billions of dollars in rewards and earnings for Microsoft sellers and partners
- Designed a multi-region architecture distributing near-real-time data processing across 3+ regions with load balancing, targeting 5-minute p50 latency

Software Engineering Intern Remote — May 2020 – August 2020

Amazon

Software Development Engineering Intern Seattle, WA — May 2019 – August 2019

EDUCATION

B.Sc. in Computer Science **University of Maryland, College Park** — May 2021

SKILLS

Languages: Python, JavaScript, SQL, C#, Java, Scala, Swift
Frameworks: Django, React, .NET, SwiftData, Stripe API
Cloud & Infrastructure: GCP, AWS, Azure, CI/CD pipelines

PROJECTS

Rental Property Manager (private beta) **Swift, SwiftData, iCloud**

iOS app for managing rental properties' expenses, leases, and rent payments, with private data sync through the user's iCloud.

Amazon SES Client **C#, UWP**

Windows Store app that gives Amazon Simple Email Service a desktop interface for managing and sending email.
